

## ANOMALIES FOUND IN THE HEBREW BIBLE (H.B.) 7-12-04

After six and one half (6 1/2).. years of researching, 99% of codes found, in being formed, were divided almost equally on a 50/50 basis, half of each, in the reverse of English mode,(right to left), hereinafter referred to as the Hebrew Mode (H.M.), and the other half (from left to right), hereinafter called the English mode (E.M.) .

On or about, September of 2003, on conducting some research on the 3-letter spelling at an (ELS 0- contiguous) of "Jesus"... [Vav/Shin/Yod], in all 39 Books of the H.B., I ran into the first serious disagreement with that research, when the search revealed 997 spellings of those 3-letters.

There were 624 of them in the H.M. and only 373 of them in the E.M. (and **not** a single one of "stand alone variety").

There was also **not** a single one of "Yeshua" (Ayin/ Vav/ Shin/Yod) "the Messiah",.. in all 1,196,922 letters. In seeking assistance from other learned people, it was finally resolved with a "shrug of shoulders".

While conducting the aforementioned research, I authored a paper entitled "JESUS IS MISSING .TWICE.." Because of this, I sent an E Mail to Computronics of Israel, citing that, and another serious defect, in their otherwise EXCELLENT Bible Code program.

On Oct 28, 2003, in attempting to rectify the erroneous data (because of the way the program is written), I re-instituted search for the 5-letter Hebrew word for "God" (Mem/ Yod/ Heh/ Lamed/Aleph).

First I isolated the problem by searching for contiguous spellings of "God" in all 39 Books. There were exactly 1,214 located. Instead of the usual 50/50 apportionment of the found words, 1,212 were in H.M., while only ( 2 ), were in English mode.

In the re-research of "**Torah**", I found 154 instances of that word, with 93 in H.M. and 61 in E.M.

In the re-research of "**Christ**" (at an ELS of 1), I found 44 instances, 41 in H.M. and three (3) in E.M.

In the re-research of "**Yahweh**", I found 7,390 instances, with 7,006 in H.M. and 384 in E.M.

The aforementioned total amount of words found, (at ELS, are then the only true spellings of the sought word(s).

Next, words which were an integral part of other words, as well as ELS 0 words, formed from "cadged" (Ersatz) words (formed with letters from two or more unrelated words) were further disregarded.

These, "ersatz" words are almost never found in a matrix (except by happenstance, a word may be formed), which may... or... may not be related to the Key code.

It is the belief of this writer, that the only significant words, which you can rely upon to be truly intended, are "stand alone") 0 ELS (contiguous)spellings of the sought word(s). In the horizontal array, because they are generally words of actual scripture.

The vertically displayed ones, which have the same ELS as the Key code,(in the matrix formation), are considered to be "summoned".... by the Key Code, whereas Vertical words with ELS's greater than Zero, are likewise deemed "summoned".

Even then, as the case of Yeshua findings, does the spelling refer to the subject being sought ? ? ? ..Not Jesus, son of. nor Jesus of the House of.. nor Jesus, father of.. etc., but "Jesus the Messiah".

Strangely enough these (4) words...(Christ, Torah, Jesus, Yahweh) .. in addition to, "Jesus", 3-letter spelling, and especially "God",.... were found...., unlike most other sought words, which are discovered in a 50 HM/50EM mode, to be heavily displayed in HM (coincidence....or....planned engineering) ? ! ?

\*\*\*\* (see the paragraph following the "table display) heavily favoring the Hebrew mode of reading/writing, as per the following table: All 39 Books **All** contiguous spellings

Word	Hebrew Mode (HM)	English Mode (% of total) (E.M.)	Grand total
<b>Christ</b>	41	3 7 %	44
<b>Torah</b>	93	61 40 %	154
<b>Jesus</b> (3-ltr)	624	373 37 %	997
<b>God</b>	1,212	2 .0015 %	1,214
<b>Yahweh</b>	7,006	384 5 %	7,390

\*\*\*\*Several mathematicians I had spoken to previously, (prior to this finding), agreed that no matter how you scramble the letters from the source document,

the finding of words, will remain basically the same, no matter how you scramble the same letters (if caused by random means).

It seems now, that some serious thought has to go into discovering the reason for this anti-mathematical occurrence(s).

It appears that the preceding (table display), has destroyed the concept, that scrambling of letters DOES **NOT** change the expected number of occurrences of any particular word, or the above noted numbers were “programmed” in, by the author of the Bible (ONE ENTITY), or at the least, modifies it (somehow).

Or perhaps, such suggests that there is a special reason for the plethora of Hebrew Mode discoveries over English Mode discoveries.

Another document that I authored entitled.. "DIRECTIONALITY".. shows that, in the Computronics Code program, a word is searched for, in all 39 Books, (should you desire same), ...from Genesis 1:1, through 2 Chronicles Chapter 36 Verse 23,... for both the H.M .... and ....the E.M.

The Computronics program, searches all Books for the proper Hebrew spelling, and then reverses the spelling of the sought word, ..from H.M.. to.. E.M.,.. in effect scrambling (but not exactly), the letters, of the source document

Since the now... inverted,.. (scrambled).. letters,.. and.. their second interrogation, is conducted in exactly the same manner, as the first time ( again, from Genesis 1:1..to 2 Chronicles 36:23), expert mathematicians would have expected the number of findings, to be commensurate (according to 99% of previous findings),.. with those of previous findings..
