

Are you curious about why I say **Global Warming is Beneficial?**

HINTS:

In 70 years the World's population will exceed **12 Billion** people.

In 140 years the World's population will exceed **24 Billion** people.

Appreciable amounts of oil will be gone in **140** years!

Some say: **70%** of the earth's **FRESH** water is **locked up** in **Antarctica**

Others say: **90%** of the earth's **FRESH** water is **locked up** in **Antarctica!**

One thing is sure! All living things need water!

Come to think of it.... **additional** livestock **need** more water also!

Don't forget, we need **MORE water** for expanded **agricultural needs!**

In the meantime:

Do **NOT** let the politicians destroy the World's economy!

To see the **beneficial effects** of **Global Warming!**

See the following:

Beneficial Global Warming

The United States, (as well as the whole world), is attempting to fix a problem, which does NOT exist!

Over the last **100 years**, the global temperature has **increased 1/4 of 1 degree**. Let us assume man continues using oil for the next **140 years** and further assume it **IS** responsible for said continued temperature increase.

Then even though the temperature **might** increase another **3 degrees**, during that period, **oil** resources will have been considerably diminished, **if not exhausted**. They will certainly be producing a lesser amount! Many of earth's oil wells were **already** reporting **diminishing** output, (in the early **2,000's**)!

Note: Some Scientists claim Global Temperatures are **declining**.... but that **WOULD NOT** explain why the **Ice Caps** would be receding! **They definitely are!** Do you want enough water to sustain the earth's inhabitants plus agricultural needs? **Earth's** population is increasing by over **62,000,000** people a year. In the last **70** years, ending in **(2008)**, man's population went from **3 Billion** people to **6 Billion**. Therefore, in the next **100**

years, the population will exceed **16 Billion** people, (plus a **commensurate amount** of livestock), additional agricultural needs, and some other needs/uses!

Because **70%** of the **earth's FRESH** water is in storage as **ice & snow**, the modest **TEMPORARY** increase of global temperatures, will continue to release additional supplies of water. With the use of electricity, even the prodigious amount of coal remaining, can be cleaned/scrubbed, (**if indeed coal was a contributing factor**), so that **IT** could **NOT** add to any further warming. Do you want to get rid of **CO2**?... Science has already proven, that can be done also!

At some point in time, with **less** greenhouse gasses being released, **equilibrium** would be reached, where **NO** further greenhouse gasses are generated. Therefore, there will be **NO** more melting of **ice/snow**! At that point, & for millennia thereafter, (since **70%** of the earth's surface is water), through **desalination**, water can be **distributed** more evenly on earth, (via pipeline). (For instance), pipe water to **Arizona**, or any other area on earth, where **needed/desired**! See a good candidate ...next!

Perhaps, we might even create an **enormous fresh-water lake**, in **Death Valley**, part of the **Mojave Desert**. *It is (292) ft below sea-level* in **California**. Because of the tremendous amount of heat in that area, evaporation of water will also tend to lower the atmospheric air temperature! Water from that lake, can then be used for irrigational purposes, (which some of the surrounding areas are currently **[2009]**, experiencing)!

Water can be continuously piped in, to make up for **evaporation losses** & **agricultural uses**! That action would provide a counter-balance to all the ice, which has melted into the oceans. That would tend to **lower the level of the ocean**! You may even want to create a waterside vacation resort, with all the attendant water activities, (**NO gasoline engines permitted**)!

The **last resort** for having enough water, in the **right places**, at the **right times**, is as follows: Alternative **renewable** resources, can supply all the **electricity** civilization needs **FOREVER**! Finally, with an inexhaustible supply of electricity, science may make, (**synthesize**), all the water earth needs, thereafter!

For the rationale, (**and more detail**), behind these statements, **go to the following** : <http://www.cifaldi.org/files/Global%20Warming%20BENEFICIAL%2034-Pages%20%2012-14-2010.pdf>

PS. I hope this gives you an unheard-of/unthought-of view of Global Warming
Yours Truly, Carmine Cifaldi www.cifaldi.org ccifaldi@tampabay.rr.com
