Subject: GLOBAL WARMING IS BENEFICIAL
Story of the Century!

Dear Ms. Wagner:

Aloha to you.... and..... your loved ones!
Many thanks for your quick response!

I keep my data **COLORFUL**, because **I believe**, it makes for easier reading, and the ability of the reader to be better able to comprehend certain important parts of my findings! I also believe that a paragraph should **NOT** contain more than **(6)** lines of printing, (unless there is a compelling reason **NOT** to have that happen)!

Such also contributes to easy readability.... thus promoting better retentivity of the subject! I HOPE I AM ... CORRECT!

Best Regards
Carmine

Ps. I have written a number of scientific articles, in layman's language, where scientific terms were necessary. I think I have provided easy-to-understand definitions therefor. Among which, I wrote an article on **“How to Stop an Errant Asteroid, from Impacting the Earth”!**

If you ARE interested.....

See www.cifaldi.org

Clik on **Files** Clik on **"Asteroid Deflection"**!

Dear Letters to the Editor:

"Kathryn Wagner" kathrynw@honolulumagazine.com

This is the Story of the Century!

GLOBAL WARMING IS BENEFICIAL

I hope Global Warming, (whatever the cause), continues for a while...YET!

To see the BENEFICIAL Effects of Global Warming

See the following: The United States, (as well as the whole world), are attempting to fix a problem, which does **NOT** exist! Over the last **(100)** years, the global temperature has increased **1/4** of **(1)** degree. Let us assume man continues using oil for the next **(100)** years and further assume, it **IS** responsible for said continued temperature increase.

Then even though the temperature might increase another **(3)** degrees, during that period, oil resources will have been considerably diminished, if not exhausted. They will certainly be producing a lesser amount! Many of earth's oil wells were already reporting diminishing output, (in the early **(2,000's)**)!

Do you want enough water to sustain the earth's inhabitants plus agricultural needs? Earth's population is currently increasing by over **(62,000,000)** people a year.

In the last **(70)** years, **(2008)**, a man's population went from **3** Billion people to **(6)** Billion. Therefore, in the next **(100)** years, the population will exceed **(16)** Billion people, (plus a commensurate amount of animals) **AND** the additional agricultural needs!

Because **70%** of the earth's **FRESH** water is in storage as **ice & snow**, the modest **TEMPORARY** increase of global temperatures, will continue to release additional supplies of water. Even the prodigious amount of coal remaining, can be cleaned/scrubbed, (with the use of electricity), so that IT would **NOT** contribute to any further warming.

Want to get rid of **CO2**? Science has already proven, that can be done also!

At some point in time with less greenhouse gasses being released equilibrium would be reached, where **NO** further greenhouse gasses **could** be generated,

if indeed such were responsible. Therefore, there **could be NO** more melting of **ice/snow!**

At that point, & for millennia thereafter, (since **70%**) of the earth's surface is water), through **desalination**, water can be distributed more evenly on earth, (via pipeline). (For instance), pipe water to **Arizona**, or any other area on earth, where needed/desired!

Perhaps we might even create an enormous fresh-water lake in **Death Valley**, (part of the **Mojave Desert**), **California**, which is **(292)** ft. below sea-level! Because of the tremendous amount of heat in that desert, evaporation of water, will also tend to moderate/lower the air temperature!

Water from that lake, can also be used for irrigational purposes, (where some of the surrounding areas are currently **[2009]**, experiencing a severe lack of water)! Water can be continuously piped in, to make up for evaporation & agricultural losses/uses!

That would provide a counter-balancing effect, to all the ice, which has melted into the oceans. The **Ice**, (expanded water), occupies more water space, than the water it melts into. It would also tend to lower the level of the oceans, (or at the least, **NOT** add to their rising)!

The last resort for having enough water, in the right places, at the right times, is as follows: Alternative renewable resources, can supply all the electricity, civilization needs **FOREVER!**

Also with an inexhaustible supply of electricity, earth's science, may create, (**synthesize**), all the water earth needs, thereafter!

For the rationale, (and more detail), behind these statements, go to www.cifaldi.org/ Click on **FILES**. Click on ... **Beneficial Global Warming**
Yours Truly,
